

IONUT CIONCU

QA Engineer

✉ cioncu_ionut@yahoo.com ☎ +40748823593 📍 Bucharest 🔗 LinkedIn 🐙 GitHub

Profile

QA Engineer with 4+ years of experience in **Payments** and **Logistics**. Strong in **REST API testing**, **PostgreSQL** validation, and **end-to-end testing** within a microservices architecture. Hands-on with **Playwright**, **Cypress**, and **Selenium**. Applying AI-assisted testing tools to enhance QA workflows.

Experience

QA Engineer, **Endava** 🔗

Jun 2022 – Present | Pitesti

Project industry: *Maritime Logistics*

Technology Stack: .NET, Postman, Selenium, PostgreSQL, AWS, Kibana, TeamCity, Git, TestRail

- Earned **QA Subject Matter Expert** status, becoming the go-to for domain knowledge, testing approaches, and feature shaping across **4+ teams (~40 people)**, while onboarding and providing **knowledge transfer** to new team members.
- Conducted **REST API end-to-end testing** across **7+ finance API workflows** and **3 external systems** using **Postman**, covering **50+ financial and invoice scenarios**; enhanced the shared collection with **automated authentication and multi-step chained workflows**, reducing repetitive test setup **from minutes to seconds** and supporting multiple colleagues across the project.
- Identified critical gaps in business flows during testing, including **5+ cross-system issues requiring third-party changes**, helping maintain **near-zero team-owned production defects** and driving user story refinements with the **Product Owner**.
- Queried **PostgreSQL** databases to confirm data integrity across services, catching discrepancies from **API calls, payment transactions, and third-party exchanges** before downstream propagation.
- Performed **root cause analysis** on production defects by correlating **Kibana** logs, **S3** file traces, third-party webhook integrations, and **APM** metrics across microservices, deploying multiple code versions via **TeamCity** to **pinpoint exact failure points** and accelerate **bug fixes and hotfixes**.
- Maintained the **Selenium regression suite** by updating locators and resolving test failures.

Project industry: *Payments*

Technology Stack: Java, Angular, Apache Kafka, Azure Ecosystem, Kubernetes

- Tested the **data ingestion pipeline**, verifying that merchant transaction data was correctly processed and transformed through each **microservice** consumer using **Azure Data Studio/Storage Explorer**.
- Monitored **Apache Kafka** topics to validate message flow between services, ensuring data integrity at each processing stage.
- Queried **Cosmos DB** to trace transaction IDs across services, comparing **Kafka payloads** and source inputs with persisted records to validate **transformations, status changes, document relationships, and correct storage**.
- Built **PowerShell** functions with parameters to automate repetitive testing workflows and managed **Kubernetes** pods for testing and defect investigation.

Technical Intern, **Vision Technology Development** 🔗

Nov 2021 – May 2022 | Pitesti

- Developed **dynamic web forms** with custom field validations and business rules on an internal **.NET/Drupal** platform, **moving paper-based workflows online** for Romanian municipalities.

Education

Master's Degree in Computer Science
University POLITEHNICA of Bucharest

Sep 2021 – Jul 2023 | Pitesti

Main Courses: Machine Learning, Artificial Intelligence, Cloud Databases.
Grade: 10/10

Personal-Projects

University Internship Platform – Bachelor's Degree Project [↗](#)

Jan 2021 – Jun 2021

- Built a full-stack web platform using Laravel (PHP, MVC), MySQL, HTML, CSS, and Bootstrap connecting University of Pitești students with internship and job opportunities from the local business environment.
- Implemented user authentication, forum-style posting and interactions, enabling students and companies to engage directly through the platform.
- Designed and managed the MySQL database schema, including migrations and relationships between users, posts, and company listings.

Catchy [↗](#), <https://getcatchy.dev/>

Oct 2025

- Built and published an open-source Chrome extension using **JavaScript** and **Manifest V3** that intercepts console.error, uncaught exceptions, and unhandled promise rejections, surfacing them as in-page toast notifications without requiring DevTools.
- Designed per-site enable/disable controls, per-error-type color coding, error history drawer, and session/permanent ignore rules to streamline **front-end debugging and UI testing**.
- Delivered end-to-end via an **AI-assisted development workflow** using Claude and CodeRabbit for automated code review, with a **CI/CD pipeline** executing **Playwright** E2E tests on every commit.

Tech-Skills

Test Automation: Playwright, Selenium, Cypress, POM, Data-Driven Testing

Programming: C#, TypeScript, OOP

API Testing: REST APIs, Postman, Insomnia

Data & Messaging: SQL, PostgreSQL, Cosmos DB, Apache Kafka

CI/CD: GitHub Actions, TeamCity

Version Control: Git, Bitbucket Cloud

Cloud & Tooling: AWS, Azure, Kubernetes, Cloudflare, Kibana

Methodologies & Concepts: Agile/Scrum, Waterfall, BDD, Shift-Left, E2E Testing, Integration Testing

AI Engineering: Prompt/Context Engineering, Prompt Injection, LLM Testing, Agent Evaluation, MCP

Soft-Skills

Leadership & Ownership: QA Leadership, Single Point of Contact (SPOC), Mentorship & Onboarding

Communication: Stakeholder Communication, Cross-Functional Collaboration

Mindset: Analytical Thinking, Problem-Solving, Attention to Detail, Adaptability, Product-Oriented Mindset, Resourcefulness
